To Room To Water Efficiency

The better built and better burning inset boiler stove

Concealed behind the beautiful lines of the traditionally styled Alpha Inset Boiler stove, with its old-fashioned attention to quality and detail, is one of the most efficient inset boilers that your money could buy.

With the Alpha's class-leading 80%-plus efficiency your fuel will go a lot further, and because the Alpha's competitive price is, shall we say, highly competitive, buying the Alpha won't break the bank either.

There's enough heat output from the 12.6kW Alpha to power six radiators, depending upon size, and all the domestic hot water you could fill a bath with, making it the natural choice for anyone who wants to replace an old back boiler or inefficient open fire.

The Alpha's key features and benefits

- CE tested in the UK to strict BS EN 13229 standards for total confidence
- Flexible and efficient wood or multi fuel operation for added choice
- Premium quality construction – eg cast iron fascia and door for radiated heat as well as heat convection vents to move warm air around room
- Four 1" BSP side water ports for flexibility and ease of installation
- Simple thermostatic comfort control for ideal water temperature
- Fits inside a standard fireplace opening so you can retain your fire surround
- Five year bodywork and boiler guarantee for peace of mind

• Hot Water
• 6 Radiators
• Stove's Heat

The Alpha easily fits in a standard 16" x 22" fireplace opening. Adjustments for depth and pipes may be needed.

5 YEARS Alpha Five Year Guarantee on Boiler & Bodywork
